All child focused projects are sufficiently equipped to deliver on the food security and nutritional needs of beneficiaries.

Our basic needs perspective positions us to provide the nutritional starting block that all South African children should have.

Every child has the right to have their basic needs met. By meeting their most basic food security and nutritional needs, they are given the freedom to fully access other developmental opportunities available.

the Sprightly Seed

Enabling Nutrition Through Sustainable Infrastructure.

Towards Sustainable Development Goals

Food Gardens

Delivering innovative and cost effective food garden solutions to schools and early learning centres. Our water-wise vertical gardens and raised beds make food security possible in most environments.

Training and Monitoring

Projects are skilled and implementation monitored over a year allowing us to guide, support and track nutritional impact on child beneficiaries.

Kitchen Facilities

Our modular and repurposed shipping container units are safe, fully equipped and turned around in 6 weeks. We give feeding programmes long term sustainability.
